

The source of inspired solutions

where nature and technology meet

PETROGAS
G A S S Y S T E M S

Time unites two forces
Evolution and knowledge converge
Their origin is the source of our inspiration
Nature and technology become one
A fusion of mutual elements
The essence is making the connection, our challenge
The solution, an indispensable link

Petrogas

where
nature
and
technology
meet

Petrogas develops, manufactures and supplies turn-key gas installations such as metering and regulating stations, dehydration units and LPG systems. We carry out the design, manufacturing and assembly, transport and commissioning of our systems.

Choose Petrogas and you will benefit from working with an experienced and respected gas systems company that is still flexible enough to realise personalised solutions. We are proud of our reputation for fast turn-around and short delivery times. Satisfied customers on every continent are testimony to our commitment to service.

The earth is the source of all gas, and fire is the point when it is converted into energy. Petrogas is a source of inspired solutions where nature and technology meet. To serve the gas industry, we take proven engineering and enhance it with innovative technology.

Without water, there's no life. And without fire, no regeneration. Two different phenomena yet true partners in nature. At Petrogas, we value partner-based relationships with our customers, and strive to support them at every step.

Petrogas

the source of gas system solutions

One person within Petrogas is assigned and has overall responsibility for an entire project from initial specification to post-installation follow up, simplifying communication and ensuring that all your requirements are met. We use only the highest quality components and materials in our designs. Components may be selected from one of our common used suppliers, with whom we have a long-term relationship, or from any other supplier following the project requirements.

With over 60 years experience to call on, we are able to supply you with standard and tailor-made solutions - including meeting special needs such as installations for operating in earthquake zones or special temperature considerations. Petrogas has also perfected the design of skid-mounted structures which are easier to transport and quicker to install than conventional installations.

Earth and air, the tangible and the invisible.
 Together they form the boundaries of our familiar world. Petrogas also combines the tangible with the invisible: reliable engineering with reassuring service and support to create an environment in which you feel comfortable immediately.

Petrogas

committed
 to service
 and
 excellence

We work closely with national and international gas companies, power station building contractors, engineering companies, gas turbine and gas motor suppliers, local and regional authorities and gas distribution organizations. Petrogas is based in Gouda in The Netherlands, where the installations are designed. Manufacturing is performed in our workshop in Eindhoven, also in The Netherlands. We can

carry out the transportation and provide assistance during installation and commissioning on site. This will be carried out by our qualified and experienced site service engineers. To assure many years of reliable operation, we also offer comprehensive service and maintenance support.

Our total product range also includes gas turbine equipment for fuel oil unloading, transfer and forwarding, compressor washing installations and CO2 vaporizers. We produce LPG facilities for shore and on-board storage, loading and unloading of tanks and vaporizers. Other Petrogas specialties include dehydration units and mixing installations.
